

ImagingDataAnalyzerForFRAP

Changye Sun, Email: sunchangye-boy@163.com

ImagingDataAnalyzerForFRAP was initially developed in MATLAB R2015b (MathWorks, Natick, MA, USA) and is compatible with Windows and macOS operating systems. The tool integrates three core modules: curve fitting, imaging visualization, and radial profile analysis (Fig. 1). Two auxiliary MATLAB scripts, *shadedErrorBar.m* [23] and *rscan.m* [24], were incorporated for error bar plotting and radial intensity scanning, respectively, and are included in the tool's repository.

This tool includes the following files:

Graphical User Interface figure:

ImagingDataAnalyzerForFRAP.fig

Codes:

ImagingDataAnalyzerForFRAP.m

calc_final_thalf.m

shadedErrorBar.m

MoRscan.m

rscan.m

Sample data:

FGF2_HaCaT.txt

FGF2_HaCaT.tif

HTF1.txt

HTF2.txt

Test.xlsx (Multi-group FRAP Data)
